

A deep-field astronomical image showing a vast field of galaxies. The galaxies are of various shapes and sizes, including spiral, elliptical, and irregular forms. They are colored in shades of blue, orange, and white, set against a dark, star-filled background. Two horizontal blue lines are positioned above and below the central text.

# Lab07 & Lec07

A deep-field astronomical image showing a vast field of galaxies in various colors (blue, orange, white) against a black background. Two horizontal blue lines frame the central text.

Same Effective Design but More Efficient

---

# MINIMIZATION

Number of Gates

Number of Inputs (2-input vs 4-input)

Number of Interconnections

Propagation Time

Cost of Gates

Circuit Area

...

A circuit may not satisfy all due to conflicting constraints!

---

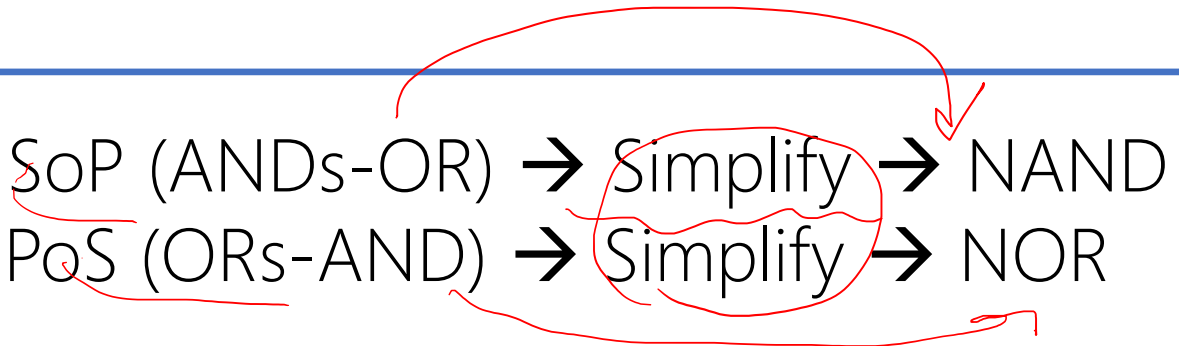

---

# MINIMIZATION

aka. Simplification

---

SoP (ANDs-OR) → Simplify → NAND  
PoS (ORs-AND) → Simplify → NOR

The image shows two logic minimization paths. The first path is 'SoP (ANDs-OR) → Simplify → NAND' and the second is 'PoS (ORs-AND) → Simplify → NOR'. Red handwritten annotations highlight the 'Simplify' step in both paths. A red circle is drawn around the word 'Simplify' in both lines. Additionally, a red arrow points from the 'Simplify' of the first line to the 'Simplify' of the second line, and another red arrow points from the 'Simplify' of the second line to the 'NAND' of the first line, indicating a relationship or comparison between the two methods.

In 1904, he put Boolean algebra  
on a sound axiomatic foundation

# POSTULATE

aka. Axiom, Assumption

<https://en.wikipedia.org/wiki/Axiom>

---

A statement that is taken to be TRUE

Serve as a premise or starting point for further reasoning

---

# I. CLOSURE

---

A set is closed with respect to an operator  $\xi$  if the result of  $\xi \in S$ :

→ Unary:  $x \in S: \xi x \in S$

Binary:  $x, y \in S: x \xi y \in S$

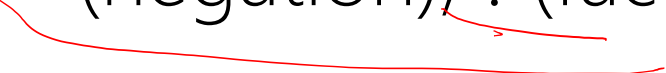

---

# I. CLOSURE

---

$$S = \{..., -2, -1, 0, 1, 2, ...\}$$

$\S = +$  (addition),  $-$  (subtraction),  $\times$  (multiplication),  $-$  (negation),  $!$  (fact)

$S$  is closed with respect to  $+, -, \times, -, !$

---

# I. CLOSURE

---

$$S = \{..., -2, -1, 0, 1, 2, ...\}$$
$$\xi = \text{^ (power)}$$

?

---

# I. CLOSURE

---

$$S = \{..., -2, -1, 0, 1, 2, ...\}$$

$$\S = ^\wedge (\text{power})$$

S is NOT closed with respect to  $^\wedge$  for  $2^{(-1)} \notin S$

---

# I. CLOSURE

---

$$S = \{0,1\}$$
$$\S = \text{+ (OR), } \times \text{ (AND), ' (NOT)}$$

S is closed with respect to +, ×, '

---

# I. CLOSURE

---

$$S = \{0, 1\}$$
$$\xi = - \text{ (negation)}$$

$S$  is NOT closed with respect to  $-$  for  $(-1) \notin S$

---

## II. COMMUTATIVE

A binary operator  $\S$  on a set  $S$  is commutative iff for all  $x, y \in S$ :

$$x \S y = y \S x$$

$(x \S y \text{ may or may not be in } S)$

---

## II. COMMUTATIVE

---

$$S = \{ \dots, -2, -1, 0, 1, 2, \dots \}$$
$$\S = \text{+ (addition), } \times \text{ (multiplication)}$$

+ and  $\times$  are commutative on  $S$  for  $x+y=y+x$  and  $x \times y = y \times x$

---

## II. COMMUTATIVE

---

$$S = \{..., -2, -1, 0, 1, 2, ...\}$$

$$\xi = - \text{ (subtraction)}$$

- is NOT commutative on  $S$  for  $x-y \neq y-x$

---

## II. COMMUTATIVE

---

$$S = \{0,1\}$$

$\xi = +$  (OR),  $\times$  (AND),  $\uparrow$  (NAND),  $\downarrow$  (NOR),  $\oplus$  (XOR),  $\odot$  (XNOR)

All are commutative on  $S$  for  $x \xi y = y \xi x$

---

# III. ASSOCIATIVE

---

A binary operator  $\S$  on a set  $S$  is associative iff for all  $x, y, z \in S$ :

$$\underline{x \S (y \S z)} = \underline{(x \S y) \S z} = \underline{x \S y \S z}$$

---

# III. ASSOCIATIVE

---

$$S = \{..., -2, -1, 0, 1, 2, ...\}$$

$\xi = +$  (addition),  $\times$  (multiplication),  $-$  (subtraction)

$+$ ,  $-$ ,  $\times$  are associative on  $S$  for

$$x \pm (y \pm z) = (x \pm y) \pm z = x \pm y \pm z$$

$$x \times (y \times z) = (x \times y) \times z = x \times y \times z$$

$$\cancel{x, y, z} \quad (x^y)^z$$

---

$$z(x, y, z) \Rightarrow ?$$

### III. ASSOCIATIVE

$$x^y(z)$$

---

$$S = \{..., -2, -1, 0, 1, 2, ...\}$$

$$\S = ^\wedge (\text{power})$$

?

$$x = 2 \quad (2^1)^3 = 8$$

$$y = 1 \Rightarrow 2^1(1^3) = 2 \neq 8$$

$$z = 3$$

---

# III. ASSOCIATIVE

---

$$S = \{..., -2, -1, 0, 1, 2, ...\}$$

$$\S = ^\wedge \text{ (power)}$$

$^\wedge$  is NOT associative on  $S$  for  $2^\wedge(1^\wedge 3) \neq (2^\wedge 1)^\wedge 3$

$$(x + [y + z])$$

---

### III. ASSOCIATIVE

---

$$S = \{0,1\}$$

$$\S = \underline{+} \text{ (OR)}, \underline{\times} \text{ (AND)}$$

$+, \times$  are associative on  $S$  for

$$x \underline{+} (y \underline{+} z) = (x + y) + z = x + y + z$$

$$x \times (y \times z) = (x \times y) \times z = x \times y \times z$$

---

## IV. DISTRIBUTIVE

---

If  $\xi$  and  $\dagger$  are two binary operators on a set  $S$ ,  $\xi$  is distributive over  $\dagger$  iff:

Left Distributivity:  $x \xi (y \dagger z) = (x \xi y) \dagger (x \xi z)$

Right Distributivity:  $(y \xi x) \dagger (z \xi x) = (y \dagger z) \xi x$

---

## IV. DISTRIBUTIVE

---

If  $\S$  and  $+$  are two binary operators on a set  $S$ ,  $\S$  is distributive over  $+$  iff:

If  $\S$  Commutative:  $x \S (y + z)$  =  $(x \S y) + (x \S z)$  =  $(y + z) \S x$

---

# IV. DISTRIBUTIVE

---

$$S = \{ \dots, -2, -1, 0, 1, 2, \dots \}$$

+ (Addition),  $\times$  (Multiplication)

①  
②

$$x + (y \times z) \stackrel{?}{\iff} (x + y) \times (x + z) \stackrel{?}{\iff} (y \times z) + x$$

$$x \times (y + z) \stackrel{?}{\iff} (x \times y) + (x \times z) \stackrel{?}{\iff} (y + z) \times x$$

---

# IV. DISTRIBUTIVE

---

$$S = \{..., -2, -1, 0, 1, 2, ...\}$$

+ (Addition),  $\times$  (Multiplication)

$$\begin{array}{l} x + (y \times z) \neq (x + y) \times (x + z) \neq (y \times z) + x \\ x \times (y + z) = (x \times y) + (x \times z) = (y + z) \times x \end{array}$$

---

# IV. DISTRIBUTIVE

---

$$\underline{S = \{0, 1\}}$$

+ (OR),  $\times$  (AND)

$$x + (y \times z) \stackrel{?}{\iff} (x + y) \times (x + z) \stackrel{?}{\iff} (y \times z) + x$$

$$x \times (y + z) \stackrel{?}{\iff} (x \times y) + (x \times z) \stackrel{?}{\iff} (y + z) \times x$$

---

# V. IDENTITY

---

$e \in S$  is an identity element w.r.t binary operator  $\S$  iff for all  $x \in S$ :

$$x \S e = x = e \S x$$

---

# V. IDENTITY

---

$$S = \{\dots, -2, -1, 0, 1, 2, \dots\}$$

$\xi = \underline{+}$  (addition),  $\times$  (multiplication)

$$e_+ = \underline{0} : \underline{x+0=0+x=x}$$

$$e_{\times} = \underline{1} : \underline{x \times 1 = 1 \times x = x}$$

---

# V. IDENTITY

---

$$S = \{\dots, -2, -1, 0, 1, 2, \dots\}$$

$\S = -$  (subtraction)

$e = ?$  

$$X - 0 = X \neq$$

$$0 - X = -X$$

---

# V. IDENTITY

---

$$S = \{..., -2, -1, 0, 1, 2, ...\}$$

$\S = -$  (subtraction)

$$e = 0$$

$$x - 0 \neq 0 - x \neq x$$

NO identity element for  $-$  (subtraction) in  $S$

---

# V. IDENTITY

---

$$S = \{0,1\}$$

$$\xi = + \text{ (OR)}, \times \text{ (AND)}$$

$$e_{+} = 0 : x+0=0+x=x$$

$$e_{\times} = 1 : x \times 1 = 1 \times x = x$$

<https://www.yuvalrob.com/>

yuvalrob

$$x^{-1} = y$$

$$y^{-1} = x$$

## VI. INVERSE

For **all**  $x \in S$ , there should be  $y \in S$  w.r.t binary operator  $\S$  iff:

$$x \S y = e_{\S} = y \S x$$

We denote  $y = x^{-1}$  and  $x = y^{-1}$

---

## VI. INVERSE

2  -2

---

$$S = \{..., -2, -1, 0, 1, 2, ...\}$$

= 0

$$\xi = + \text{ (addition)}$$

$$\boxed{x} + \boxed{-x} = (-x) + x = \underline{e_+} = 0$$
$$x^{-1} = -x$$

$$2 \times \left(\frac{1}{2}\right) = e_x = 1$$

$\rightarrow \notin S$

## VI. INVERSE

$$S = \{\dots, -2, -1, 0, 1, 2, \dots\}$$

$$\xi = \times \text{ (multiplication)}$$

S does not have the inverse property for  $\times$  since

$$2 \times \frac{1}{2} = \frac{1}{2} \times 2 = e_x = 1 \text{ but } \frac{1}{2} \notin S$$

$$0 + \overset{0}{\textcircled{?}} = e_+ = 0$$

$$\cancel{1 + \textcircled{?} = e_+ = 0}$$

---

## VI. INVERSE

---

$$S = \{0, 1\}$$
$$\S = \textcircled{+ \text{ (OR)}}, \textcircled{\times \text{ (AND)}}$$

?

---

# VI. INVERSE

---

$$S = \{0,1\}$$

$$\S = + \text{ (OR)}, \times \text{ (AND)}$$

$$1+?= ?+1 \neq e_+ = 0$$

$$0 \times ? = ? \times 0 \neq e_\times = 1$$

$$x^{-1} = y \rightarrow \S$$

---

$$x = y \rightarrow \S +$$

## VII. COMPLEMENT

For all  $x \in S$ , there should be  $y \in S$  w.r.t binary operators  $\S$  and  $+$  iff:

$$x \S y = e_+ = y \S x$$

$$x + y = e_\S = y + x$$

We denote  $y = x'$  and  $x = y'$

$$0' = 1$$

## VII. COMPLEMENT (NOT)

$$S = \{0,1\}$$

$$\S = + \text{ (OR)}, \times \text{ (AND)}$$

$$1+0=0+1 = e_{\times} = 1$$

$$0\times 1=1\times 0 = e_{+} = 0$$

$$0' = 1, 1' = 0$$

---

# BOOLEAN ALGEBRA
